10. (New) The process as claimed in claim 2, characterized in that the crystallization is carried out in the presence of at least one template compound.

11. (New) The process as claimed in claim 10, characterized in that, after contact with the atmosphere in the form of a carrier gas stream with the reaction discharge to be dried, condensable template compounds present in the stream are condensed out.

12. (New) The process as claimed in claim 11, characterized in that template compounds which are included in the dried crystalline solid are separated from the solid by means of at least one wash process.
